

UNPACKING THE EQUIPMENT

Before beginning installation, check the overall condition of the equipment. Remove packing materials, and examine all components for signs of shipping damage. Any shipping damage is the customer's responsibility and should be reported immediately to the freight carrier.

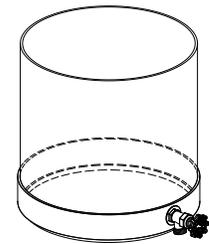

These instructions cover both below grade (EC1630) and above grade (EC1635) drain kits. Below grade drain kits (EC1630) should be used in applications that requires the Munters Tank Kit to be buried beneath the surface of the ground. Above grade drain kits (EC1635) may be utilized in applications where the Munters Tank Kit is setting on or above the ground surface.

Each EC1630 Kit Includes:

Item	Catalog No.	Qty.	Description
[A]	EC1210	1	1" x 39"L. Pipe Nipple, PVC
[B]	EC1195	1	3/4" MPT x 1" Slip, Adapter, PVC
[C]	EC1336	1	3/4" Drain Fitting, FPT Inlet/Outlet, PVC

EC1630

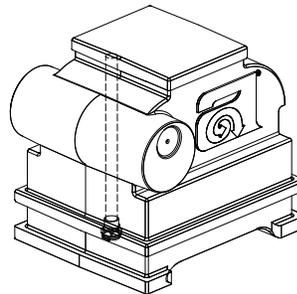

EC1635

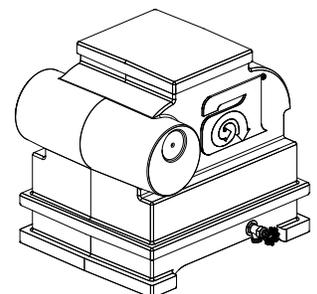

White PVC Tank

Each EC1635 Kit Includes:

Item	Catalog No.	Qty.	Description
[A]	EC1209	1	3/4" MPT x 3/4" GHT Drain Valve, PL
[B]	KW3037	2	1.06"IDx1.75"ODx.06 Flat Washer, AL
[C]	KN1905	1	3/4" FPT Lock Nut, ZP

EC1630

EC1635

Black PVC Tank

INSTALLATION INSTRUCTIONS

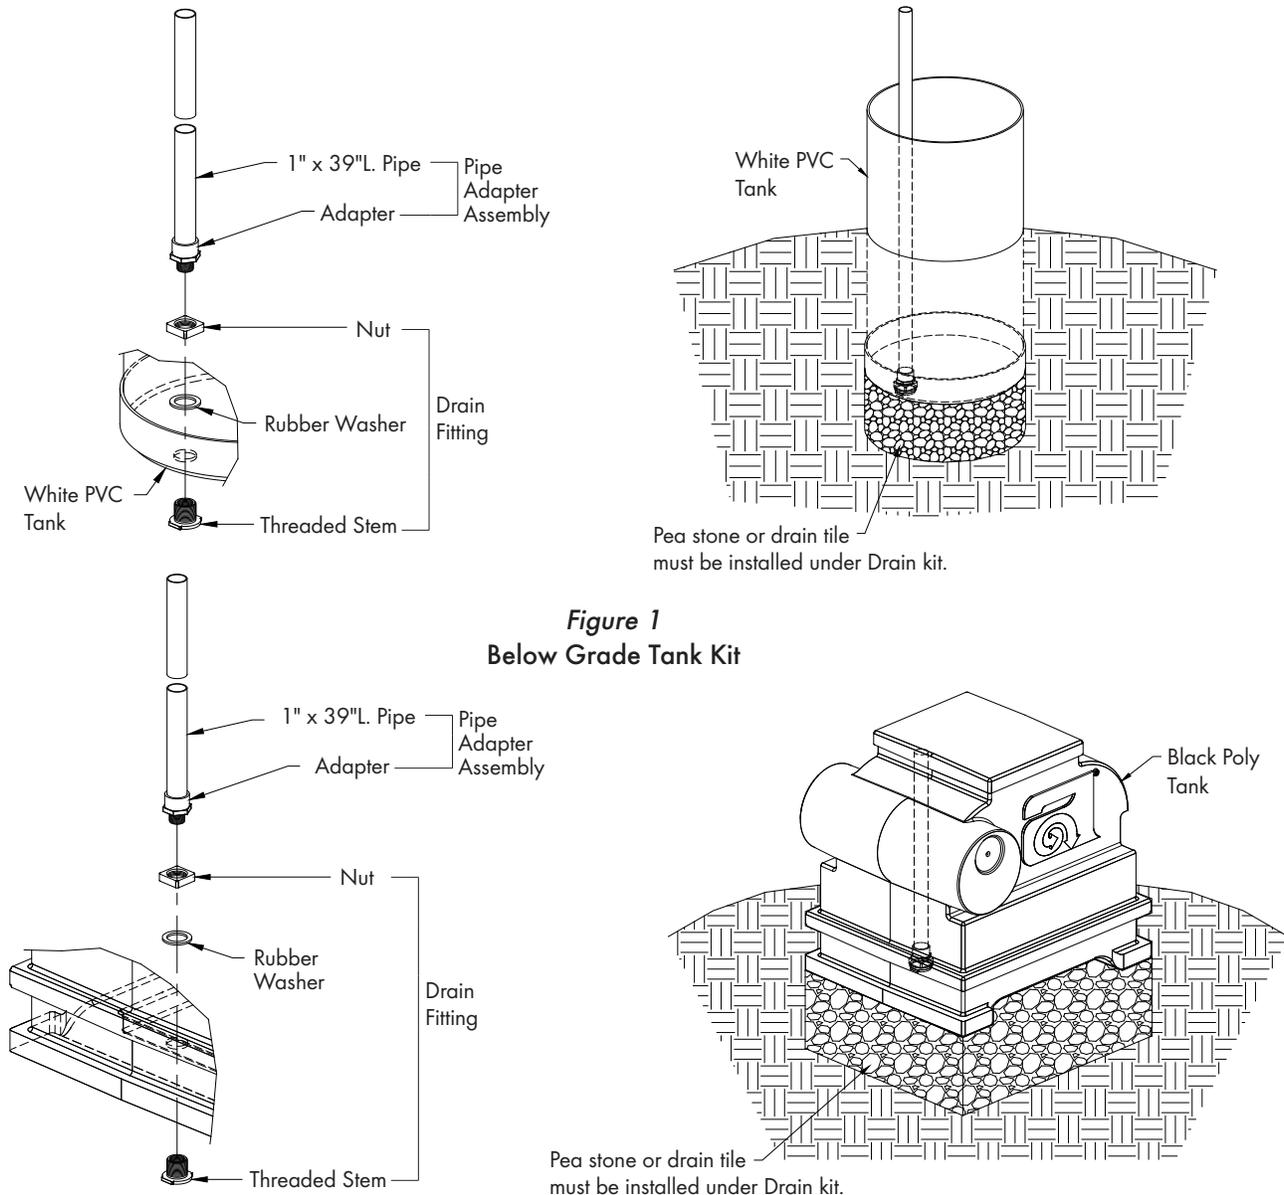

These float valve instructions depict installation in either a 10" tee or 15" tank kit.

Below Grade Tank Drain, EC1630

The below grade tank drain kit requires a drain tile, or similar means, to remove the water from beneath the tank drain kit. This tank drain kit provides components (nipple, adapter and 3 piece drain fitting) necessary to drain the tank from the bottom side. Failure to supply adequate means of water removal beneath the tank will result in system malfunction, i.e. tank will not drain, tank support may wash out, etc...

- 1) Mounting the tank drain kit requires drilling a 1 $\frac{3}{8}$ " hole in the bottom of the tank. Be sure to position hole away from the center of the tank (toward the outside edge) to allow room for submersible pump, and also to avoid interference with float valve mechanism.
- 2) Install the drain fitting. The threaded stem should come in from the bottom of the tank, exposing threads on the inside of the tank. Place the rubber washer over the threaded stem from inside of the tank and tighten in place with the nut.
- 3) Glue the 1" x 39"L. pipe to the 3/4" MPT x 1" Slip adapter. When the connection has setup/dried it can be screwed into the internal threads of the drain fitting. *See Figure 1.*

Note: Trim the 1" pipe length as necessary, it must be above the waterline and below the tank lid.

Above Grade Tank Drain, EC1635

The above grade tank drain kit provides components (valve, washers, and nut) necessary to drain the tank from the sidewall. Customer supplied water resistant caulking is required to properly seal valve. It is the users' responsibility to direct the water away from the tank support and side walls of the building. The exit side of the valve incorporates a standard garden hose thread.

- 1) Mounting the tank drain kit requires drilling a 1 1/8" hole in the side of the tank, close to the bottom surface.
- 2) Place a washer on the valve and install the valve from the outside of the tank. To prevent leakage, it's necessary to put a thick bead of water resistant caulking around the washer before inserting into drilled hole.
- 3) Place a thick bead of water resistant caulking on the remaining washer and slide it over the valve from the inside of the tank, use nut to secure the valve in position. *See Figure 2.*
